

Theft-Prevention Solutions for Notebooks and Desktop Computers

Compucage International Inc. is a fast-growing manufacturing company that designs and builds enhanced physical security devices for computing systems. Since 1999 we have worked with *Fortune* 500 companies, educational institutions, university bookstores, government agencies, military personnel, and retail stores. Our solutions have also been used in warehouse, office, and retail locations.

Compucage currently has distribution networks in Australia, Canada, United States, England, France, Germany, Sweden, and Chile. Distributors include IBM Canada Tech Data and Dell Corporation.

In 2003, *PC Magazine* voted Compucage one of the best physical security products at Comdex, one of the largest IT trade shows in North America. The company is currently a member of the National Retail Federation (NRF), the National Association of School Safety and Law Enforcement Officers (NASSLEO), Insurance Canada, and Campus Computer Reseller Alliance (CCRA).

What We Do

The focus of our business is to save corporations money by protecting their resources and reducing theft and insurance claims. We offer some of the best solutions for preventing theft of computers in the security market.

Some companies are looking to reduce their immediate physical losses, while other organizations are looking to reduce the risk of public disclosure if confidential data is stolen.

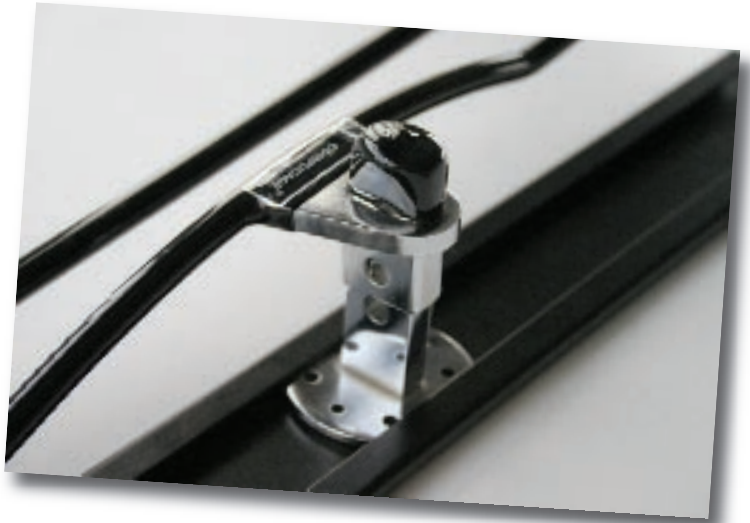

How We Do It

Compucage offers strong, theft-deterrent solutions that protect computer notebooks and computer systems from physical loss. Our products are ideal in high-traffic areas that are prone to theft, such as kiosks, trade show booths, hotels, libraries, labs, dorms, and hospitals.

Compucage offers a wide variety of options for computer security, with unique products that can secure a variety of laptop, desktop, and LCD monitor sizes.

Compucage devices can be mounted and fixed to a desk or wall, or can be bolted into the floor. There is also a cable option for added security. There are portable designs that can lock a laptop in either open or closed positions. They are non-intrusive and do not restrict airflow.

All products are easy to install and use.

The Products

Compucage has impressed the physical security market for eight years with innovative products, including the Benji 1 & 2, CompuCollar, L4000, and the T-Series. We also have a device called the BMA that secures notebooks in service vehicles. New products continue to be developed, including the R8620-M and the Spyder.

The R8620-M is the first product with a keyless design that allows clients the freedom to use their own padlocks and key options. One consistent key can be used to lock an unlimited number of protection devices. An optional mounting track provides greater flexibility to position and secure multiple units.

The Spyder is spinning the new web in laptop security. It is Compucage's most versatile design that is a perfect companion to any notebook. It is ideal for travelers and fits in most laptop bags. For the first time personal identification tabs will be included.

All Compucage products are made from hardened steel and have a vinyl coating. The keys are dimpled-cut and cannot be reproduced at a conventional locksmith. Each model has been vigorously tested to meet a high quality standard.

Our Future

When asked how Compucage International became a prominent leader in the computer security industry, President Steve Galant answered, "We listen to the needs of our customers and design innovative products to offer them the best possible solution. Our success can be attributed to our commitment to be the best computer security company worldwide."
